Among the interpretations are land capability groupings, productivity ratings for trees, farm and horticultural crops, and soil ratings and limitations for town and country planning, dwellings, roads, sanitation, wildlife, recreation, and the like.

In addition, a technical discussion of soil morphology, the relation of soils to their environment, principles of soil classification, and a general description of the climate and other features significant to soil problems are included in soil surveys. Requests for a list of published soil surveys available in your state, or inquiries regarding these surveys, should be addressed to the State Office of the Soil Conservation Service in your state or to the Soil Conservation Service, U.S. Department of Agriculture, Washington, D.C. 20250.

These publications consist mainly of tables of statistics on one or more closely related agricultural commodities. They may include statistics on production, movement from the farm, receipts at principal markets, reshipments, farm and market prices, exports and imports, and foreign production and prices. They are of particular interest to persons actually engaged in marketing, or any business affected by agricultural production and marketing.

TECHNICAL BULLETINS

Technical Bulletins present results of research work carried on by the Department of Agriculture and its cooperators. They are written in technical language and are intended chiefly for distribution to scientists and specialists in the fields studied.
